

VISION Outside Insulated

Vision Outside Insulated is the specially adapted version for designs in Telecom, HVAC-applications and similar where insulated or double skinned doors are used.

Vision Outside Insulated is especially developed for your electric enclosures that need to keep valuable electronics in a climate-controlled environment under a fixed temperature. Used with insulated doors to maintain a temperature-controlled climate inside the enclosure, protecting the electronics.

The system is designed for enclosures that are equipped with climate control (HVAC, HEX etc). The system is hidden inside the insulated door providing thermal break and preventing condensation to form.

The locking points consists of a protruding frame part and a receptacle hidden on the inside of the door.

The advantages with Vision Outside Insulated

- Allows an insulated door to be open, closed and locked in the most professional way in the market.
- Concealed mounting resulting in an aesthetically appealing design.
- The latching mechanism is placed outside the sealed door area, resulting in a "clean" door design with no cut-outs in critical areas.
- As door is latched - it is fixed in all dimensions (X, Y and Z) creating a vault-type latching performance, second to none.
- Direct load transfer from frame to door i.e. no oscillations from load transfer via rods. · Unlike other systems on the market, Vision Outside - Insulated operates with door allocation prior to gasket compression. No shearing or side loads on the gasket means better sealing properties and longer gasket life.
- The system complies with the world's most stringent requirements for vibration tests, torque tests and corrosion tests for use in Zone 4 telecom equipment applications and similar.
- Versatile and flexible means that the Vision system is capable of filling all your enclosure latching needs. Single system designation means higher production efficiency and less supply chain costs.
